SUMMARY

I'm the founding engineer at Anthum.ai and work across the whole product, mostly on the AI agent and payments. Before that I spent six years on ML and full-stack work, from audio models to production web apps. I like owning things end to end, from the first rough version to keeping it running in production.

EXPERIENCE

Founding Engineer, Anthum.ai

Jan 2026 – Present

AI ad-creation platform where creators make video, image and audio with frontier models and brands pay them on contests and attributed Shopify sales. 283 merged PRs, 57% of all human commits since Feb 2026.

- Built the AI agent from scratch, then rebuilt it to generate images, video and audio with budget and approval gates.
- Built subscriptions, billing and creator payouts from scratch on Stripe and Shopify, including revenue share with order attribution, clawbacks and fraud holds.
- Took the Shopify app through App Store submission and integrated Meta Ads to publish approved creator videos as ads.
- Integrated about 30 generative models (Veo 3.1, Sora 2, Kling, Seedance, FLUX, ElevenLabs) across six providers behind one model registry; an async pipeline cut Kling submit time from up to 48s to 610ms.
- Closed 66 publicly writable database functions, cut anonymously callable functions from 242 to 12 and re-scoped 296 Row-Level Security policies, with CI grant checks to block regressions.
- Reworked a health check that used 48.6% of production database time and cut 1.2 MB (gzipped) from every creator page.
- Shipped with Claude Code and Codex, backed by about 7,450 unit tests and 540 Deno tests.

Information Technology Operations Specialist, UT Arlington

Aug 2024 – Dec 2025

- Built an AI support assistant (Python, NLP, LLM-generated responses) wired into ServiceNow; intent detection plus retrieval-grounded answers cut ticket resolution time 18% on live operational casework.
- Supported 5,000+ users on Linux, macOS and Windows; created knowledge-base guides that cut ticket escalations 20%.

AI Engineer, Saintech Solutions LLC

Aug 2022 – Dec 2023

- First technical hire; took AI features and full-stack systems (React, Next.js, Node.js) from zero to production, including the APIs and data pipelines behind them.

Full Stack Engineer, HA Talent Tech

Jan 2021 – Aug 2022

- Built and deployed a production full-stack app (React, Node.js, REST) with secure auth and RBAC at 99.99% uptime.

Machine Learning Engineer, SmartKnower

Jul 2020 – Dec 2020

- Trained classification models for adaptive course recommendations serving 10,000+ learners; lifted engagement 23%.

ML Engineer, 1StopAI

Jan 2020 – Jun 2020

- Deployed emotion detection models on support-call audio, tuning inference for real-time call routing.

PROJECTS

FinAI, multi-agent finance assistant

Python, OpenAI API, Plaid

- Specialized agents read live Plaid transactions to track spending, predict budgets and recommend actions, with LLM-summarized market news for context.

Knowledge distillation for efficient vision models

PyTorch, Quantization

- Compressed a 669 MB teacher CNN into a 6.5 MB student (99% smaller) at 97% accuracy using pruning and quantization.

EdgeConnect+, generative image inpainting

Python, GANs

- Dual-GAN model guided by edge and color priors; cut perceptual loss 7% on CelebA and Places2.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Bash

AI and LLMs: Large Language Models (LLMs), AI Agents, Tool Use, Human-in-the-Loop Approval, Retrieval-Augmented Generation (RAG), Embeddings, pgvector, Prompt Engineering, Prompt Caching, Context Engineering, Model Evaluation and Selection, Fine-Tuning, Multimodal Generation, Model Routing, Anthropic Claude API, Gemini, Vertex AI, OpenAI API

Backend and Integrations: PostgreSQL, Supabase, Row-Level Security, Edge Functions, Deno, Node.js, React, Next.js, REST APIs, OAuth, JWT, Stripe Billing, Stripe Connect, Shopify API, Meta Ads

Cloud and Tooling: Cloudflare R2, AWS, Docker, GitHub Actions, CI/CD, OpenTelemetry, Claude Code, Codex, Cursor

EDUCATION

Master of Science in Computer Science, University of Texas at Arlington

GPA 4.0/4.0

Bachelor of Engineering (BE) in Computer Science, GITAM, Hyderabad

CGPA 8.47
